Blockchain in Trade

Frank Lu

Ping An OneConnect

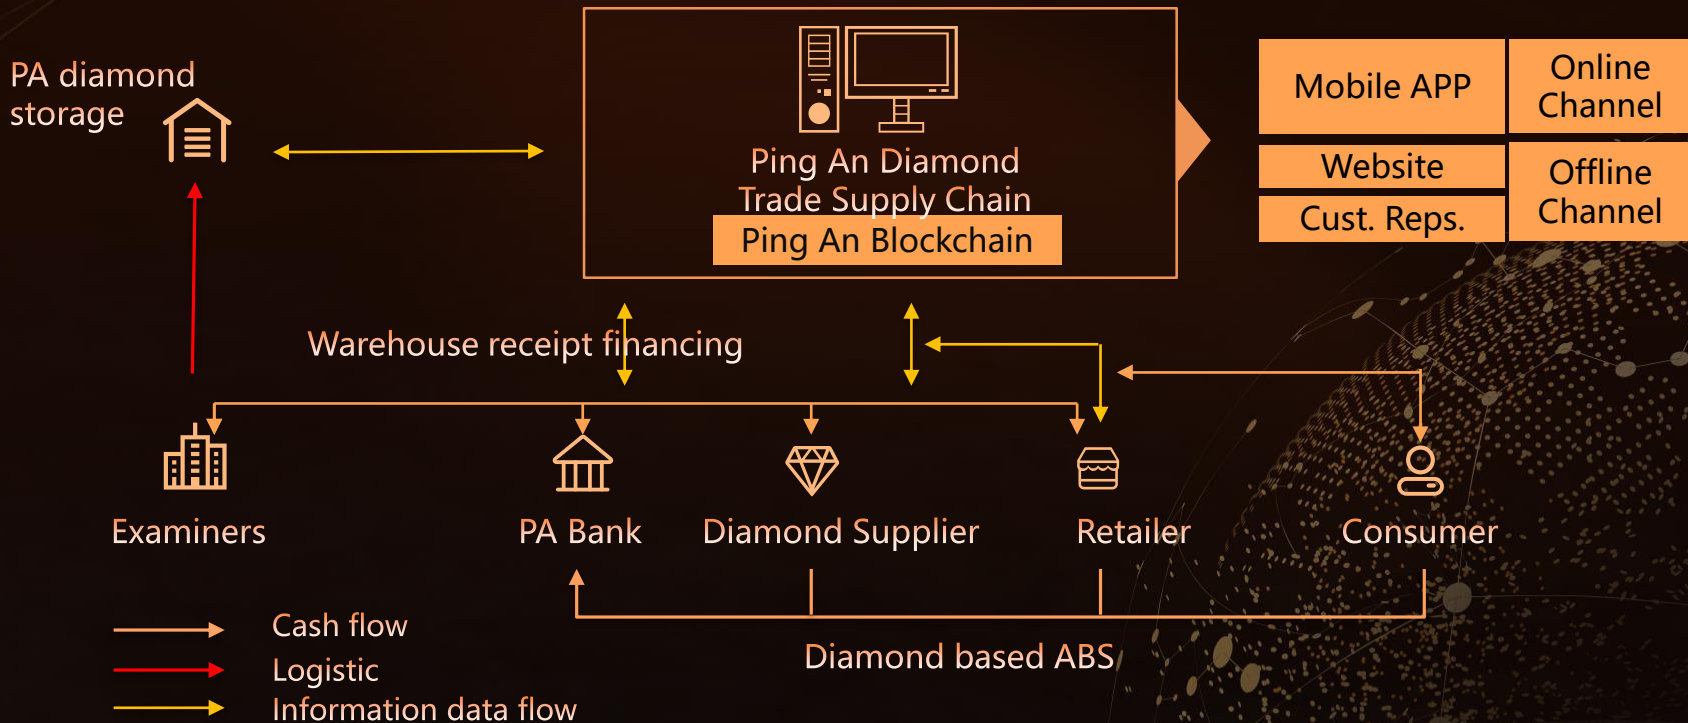

Connecting the platforms

A trade platform is only as strong as its ecosystem, and distributed Ledger technology (a.k.a Blockchain) provides a mechanism to connect platforms to create a larger ecosystem.

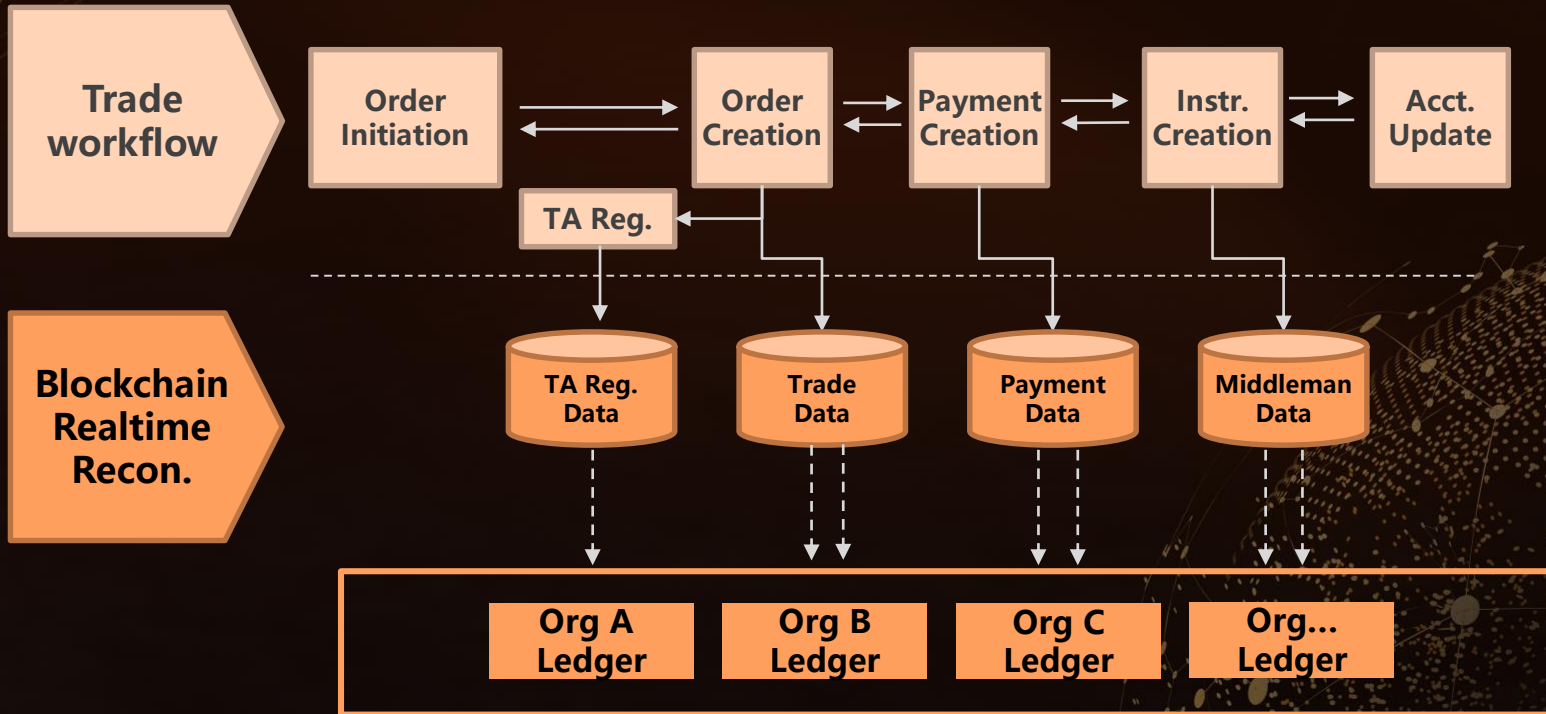

Connecting the data

Trust offered by blockchain is only as good as the trustworthiness of its data. If used correctly, it can improve the quality of any data by interconnecting their sources

Connecting the systems

Disconnected systems cause inefficiency. Blockchain provides a standardized channel to interlink systems that were otherwise separated
